herAlly !!

INTRODUCTION

Our project title is herAlly, this project basically deals with the providing a common platform where women can report the victimization they faced or currently facing. Our platform list out the genuine and rated NGOs that works on this domain.

Today main problem is any women can't feel safe to reveal their identity while reporting incidents they face or facing.

Some NGOs try to maintain privacy to some extent but they fail because of many reasons some of them are..

Inadequate Anonymity in Reporting, Unintended Information Leakage, Insecure Communication Channels, Poor Access Control, Tracking of Physical Visits or Interventions etc.

Due to all this again a women may feel unsafe to reports the incidents.

Our platform act as a mediator that is hiding personal details of victim until he manually choose to reveal it to NGOs .

Our platform also ensure No additional information of user goes to Ngos until user give it manually.

Victim communicate with NGOs anonymously , seeks kinds of help like online counselling and legal help.

Due to this platform women can reports their incidents without any fear of indentity reveal.

Problem Statement

There are several challenges within society and NGO practices that contribute to women feeling hesitant or insecure about reporting incidents. Here are some of the main issues:

Women often hesitate to report safety issues due to societal stigma, privacy concerns, and fear of retaliation. Many worry that sharing personal details could expose them, particularly if NGOs lack strict confidentiality.

Complex reporting processes, judgmental staff, and slow NGO responses further discourage reporting. Some women also fear police involvement or legal complications. Additionally, cultural norms may downplay women's experiences, creating pressure to stay silent.

To encourage reporting, NGOs need secure, anonymous systems, empathetic staff, and a streamlined process that respects women's privacy and safety concerns.

Solutions !!

Creating a platform that hides the identity of victims while facilitating secure communication with NGOs is a powerful solution. Here's a streamlined approach:

Key Features of the Platform

Anonymous Reporting System

Women can report incidents or get legal advice without revealing personal details. Each report generates a unique case ID, allowing them to follow up anonymously.

Women can share their experiences safely, knowing their identity is protected.

Secure Communication Channel

NGOs see only necessary information and do not have access to the woman's identity unless she chooses to share it voluntarily.

Preliminary Verification

To assess credibility, the platform can ask targeted, incident-specific questions. Women can optionally submit non-identifiable evidence (photos, location data).

Allows NGOs to assess cases without compromising privacy, reducing the risk of false reports.

Trust and Transparency

Inform users at each step about data privacy, encouraging trust in the platform.

Show NGOs that cases are marked "verified" or "flagged for review," ensuring women feel supported and prioritized.

This platform empowers women to report incidents safely, helps NGOs act on credible cases, and fosters a sense of security and trust, breaking down the barriers to reporting.

Flow
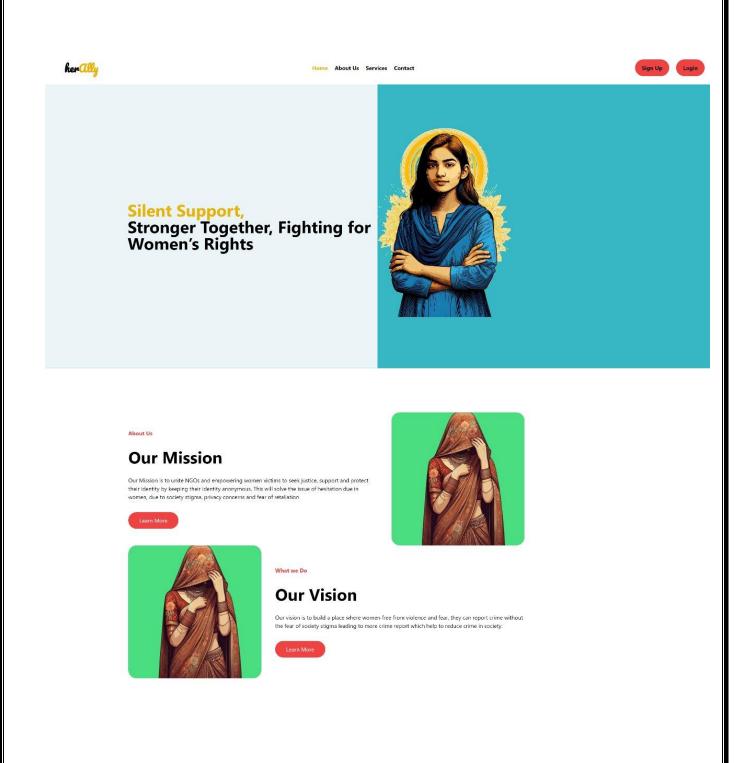

Our platform is used by both user and Ngos. So,the flow is…

➢ User login to our platform by userid and password if they exist. And signup by using phone no. or email id.

➢ After signup/login user go through listed NGOs and select one of them to communicate their query related to incidents they faced or facing.

➢ After that NGOs connect with user and ask the question relating to query they communicated.

➢ If they found complaints/query is genuine, they procced further by providing counselling or legal support according to the nature of complaints/query.

➢ NGOs provide consistent feedback to the users via our platform related to progress of the work.
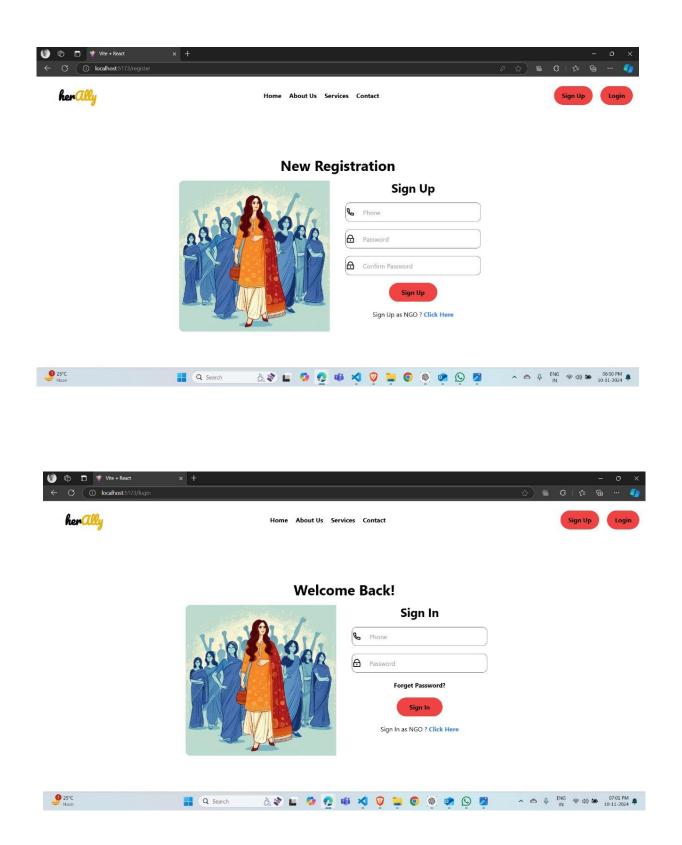

Tech Stack and tools

➢ **Mern stack**

➢ **Figma**

➢ **Microsoft designer for image**

➢ **Tailwind**

➢ **Locomotive js**

➢ **Vs code**

➢ **Github**

# Output !!

- **Home page**

• User sign up and sign in
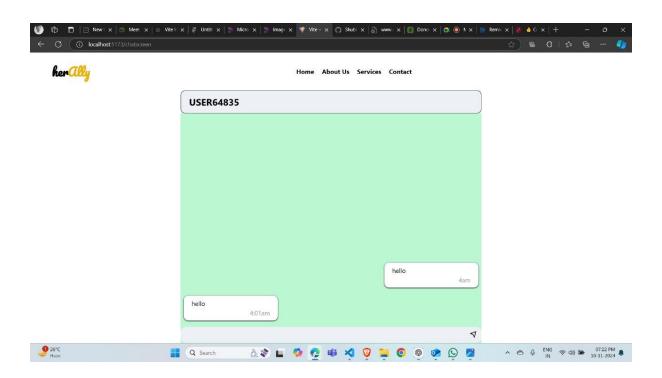

• NGOs signup and sign in

- **User end chat**

- **NGOs end chat**

NGOs List

Future Scope and Coclusion !

Our project has lot of improvement scope some of the key improvement areas are………

- Authenticate users .
- Minimize false Registration and pranks.
- Spread over various cities.
- Automatic Chat deletion after certain time .

This project named herAlly make impactful/revolutionary changes in society. Women has don't go to anywhere or research about anything about where we can express their incidents as our platform provide common platform where bunch or NGOs registered themselves and provide assistance to them.

The Women's Safety Platform we developed addresses critical challenges faced by women in India when reporting safety concerns, including issues of privacy, accessibility, and trust. By facilitating anonymous, secure communication between women and verified NGOs, this platform empowers women to report incidents without fear of exposure or retaliation. The platform's robust authentication of NGOs ensures that only legitimate organizations can engage, building a trusted network of support for women.

This will also aware women about their rights and power that further help in reducing the crimes against women.
